

Microsoft® Exchange Server 2010 3 day course

This compressed* three-day, instructor-led course will provide you with the knowledge and skills to configure and manage an Exchange Server 2010 messaging environment. This course does require previous Exchange Server experience, and that students have significant experience in managing Windows Server and Active Directory services or Active Directory Domain Services (AD DS). This course will teach you how to configure Exchange Server 2010, as well as provide guidelines, best practices, and considerations that will help you optimize your Exchange Server deployment.

Audience Profile

This course is intended for people aspiring to be enterprise-level messaging administrators. Others who may take this course include IT generalists and help desk professionals who want to learn about Exchange Server 2010. People coming into the course are expected to have at least three years experience working in the IT field, typically in the areas of network administration, help desk, or system administration. As some parts of this course are compressed* or modified, ideally you should have some experience with previous Exchange Server versions.

At Course Completion

After completing this course, students will be able to understand CORE concepts such as:

- Install and deploy Exchange Server 2010.
- Configure Mailbox servers and Mailbox server components.
- Manage recipient objects.
- Configure the Client Access server role.
- Manage message transport.
- Plan and implement backup and restore for the server roles.
- Plan and configure messaging policy and compliance.
- Configure Exchange Server permissions and security for internal and external access.
- Monitor and maintain the messaging system.
- Transition an Exchange Server 2003 or Exchange Server 2007 organization to Exchange Server 2010.

*Some components of the course (included in your textbook) may be excluded or looked at only briefly due to time constraints. If students attending the course are already familiar with core concepts above, content MAY by instructor decision only, be adjusted to reflect student knowledge. This would include areas such as:

- Configure the Unified Messaging server role and Unified Messaging components.
- Implement High Availability across multiple sites and implement Federated Sharing.
- Configure the secure flow of messages between the Exchange Server organization and the Internet.
